## 无法使用 IPv6 和 RDMA 挂载 NFS 卷

[https://kb-cn.netapp.com/on-prem/ontap/da/NAS/NAS-KBs/Unable\\_to\\_mount\\_NFS\\_volume\\_with\\_IPv6...](https://kb-cn.netapp.com/on-prem/ontap/da/NAS/NAS-KBs/Unable_to_mount_NFS_volume_with_IPv6...)

Updated: Tue, 21 Apr 2026 07:00:50 GMT

### 适用于

- ONTAP 9
- NFSv4
- IPv6

## 问题

- 用户无法使用 IPv6 和挂载选项 'rdma' 挂载 NFS 卷：

```
sudo mount -o rdma '[10:02:04:27:ba:18:30:20]:/nfs_vol' /mount
mount.nfs: Failed to resolve server 10:02:04:27:ba:18:30:20: Address
family for
hostname not supported
```

- 不指定挂载选项的挂载尝试有效：

```
sudo mount -t nfs '[10:02:04:27:ba:18:30:20]:/nfs_vol' /mount
df -h

[10:02:04:27:ba:18:30:20]:/nfs_vol 501G 3.4G 497G 1% /mount
```
