

由于目标集群已满，远程复制在 Element 中暂停

https://kb-cn.netapp.com/on-prem/SolidFire/Element_OS_Kbs/Remote_Replication_pauses_in_Elemen...

Updated: 周五, 11 7月 2025 07:45:41 GMT

适用场景

- NetApp Element 软件（所有版本）
- NetApp HCI
- SolidFire AFA

问题描述

集群之间的配对卷的远程复制停止，并在集群 UI 中显示以下一个或多个警报的组合（<https://<MVIP>>）和 [ActiveIQ](#) 中：

对于仅快照复制模式下的卷：

警报类型：

```
remoteRepSnapshotClusterFull
```

说明：

The following volumes have paused remote replication of snapshots because the target cluster is too full: volume <volume_ID> cluster pair ID <cluster pair_ID> target cluster <target_cluster_name>. To resolve this fault, free up some space on the target storage cluster.

对于所有其他复制模式下的卷：

警报类型：

```
remoteRepClusterFull
```

说明：

The volumes have paused remote replication because the target storage cluster is too full. To resolve this fault, free up some space on the target storage cluster.
