Ping已终止"mccIpPingNetworkEndpoints迭代器∶∶create_imp ()"操作超时

适用场景

- ONTAP 9
- MCC IP

问题描述

- 此节点已联机并提供数据、聚合托管在此节点上、但无法在集群中访问。
- 命令"show MetroCluster check show -instance"可创建以下输出：

```
Time of Check: 4/24/2023 08:47:25
  Name of the Component: nodes
```

```
         Result of the Check: warning
Additional Information/Recovery Steps: All checks could not be run as some
nodes were not reachable. Check if the cluster peer is available.

         Time of Check: 4/24/2023 08:47:25
         Name of the Component: lifs
         Result of the Check: ok
Additional Information/Recovery Steps:

         Time of Check: 4/24/2023 08:47:25
         Name of the Component: config-replication
         Result of the Check: ok
Additional Information/Recovery Steps:

         Time of Check: 4/24/2023 08:47:25
         Name of the Component: aggregates
         Result of the Check: ok
Additional Information/Recovery Steps:

         Time of Check: 4/24/2023 08:47:25
         Name of the Component:clusters
         Result of the Check: ok
Additional Information/Recovery Steps:

         Time of Check:4/24/2023 08:47:25
         Name of the Component: connections
         Result of the Check: warning
Additional Information/Recovery Steps: The "ping" command terminated using the
network addresses "10.0.0.4" and "10.0.0.3" on node "Node-02" in cluster
"Cluster-01". Reason: Timeout: Operation
"mccIpPingNetworkEndpoints_iterator::create_imp()" took longer than 25 seconds
to complete [from mgwd on node "Node-01" (VSID: -3) to mgwd at 1.1.1.1]

         Time of Check: 4/24/2023 08:47:25
         Name of the Component: volumes
         Result of the Check: ok
Additional Information/Recovery Steps:
```

- 此文件可能显示为已关闭

- 通过CLI实施的命令可能会因超时错误而失败：

```
::> storage failover takeover -ofnode Node_n2 -option normal

Warning: Unable to list entries on node Node_n2. Timeout: Operation
"software_image_iterator::next()" took longer than 25 seconds to complete
[from mgwd on node "Node_N1" (VSID: -1) to mgwd at 169.254.12.1]
```
